PROFESSIONAL SUMMARY

Offensive Security Engineer and Communications & Electronics Engineering student specializing in penetration testing, vulnerability research, reverse engineering, exploit development, and Active Directory assessments. Hands-on experience across CTFs, malware analysis, and practical security tooling. Focused on building low-level security expertise through binary analysis, exploit development, and research-driven malware case studies.

WORK EXPERIENCE

Intern — CIB (Commercial International Bank) *Jul 2026 – Aug 2026*

• Completed a banking internship at CIB (11 July – 1 August 2026), gaining exposure to enterprise IT and banking systems.

Freelance Electronics Project Consultant *2024 – Present*

• Design and deliver electronics graduation projects for university students.

Private Tutor – Programming, Physics & Mathematics *Jan 2023 – Present*

• One-on-one tutoring focused on applied problem-solving for high school and university students.

SECURITY PROJECTS

PrivEsc-Suite *2025*

• Linux privilege escalation framework spanning 3,300+ lines — covers 183+ SUID binaries, sudo NOPASSWD vectors, and kernel CVEs, with a weighted risk-scoring engine.

BattaR *2026*

• Single-file Python CLI automating the exploit-development recon-to-shell chain for ELF/PE binaries — auto-flags secret categories, builds ret2libc gadget chains, and verifies exploits live.

TCP Full Scan Tool *2024*

• Async TCP full-range scanner (1–65535) with banner grabbing, service fingerprinting, and CSV export — built for network reconnaissance.

SECURITY RESEARCH & MALWARES

Jigsaw Ransomware Case Study *2026*

• Reverse engineered a .NET ransomware sample; deobfuscated the sample, extracted AES key/IV material, and validated file decryption.

WannaCry Ransomware Case Study *2026*

• Analyzed WannaCry internals, encryption workflow, embedded payloads, Tor/C2 components, persistence, and kill-switch behavior.

ILOVEYOU Worm Case Study *2026*

• Analyzed the ILOVEYOU VBScript worm, propagation logic, Outlook automation, registry changes, and payload behavior.

CERTIFICATIONS & TRAINING

• eLearnSecurity Junior Penetration Tester (eJPT) – 2026
• CCNA (Training) – Cisco Certified Network Associate
• Exploit Development: Buffer Overflows, Stack Memory & Shellcode – 2025
• System Security & x86 Assembly Fundamentals – 2025
• Red Hat System Administration I (RHCSA Track) – 2025

EDUCATION

ITI - Information Technology Institute + CyberTalents *Jun 2025 – Nov 2025*

• 4-month cybersecurity bootcamp — offensive security and red team methodology.

B.Sc. Communication and Electronics Engineering *Aug 2022 – Aug 2027*

• Currently enrolled — Expected Graduation: 2027 | GPA: 3.05

SKILLS

Offensive Security: Penetration Testing, Vulnerability Research, Post-Exploitation, AD Security Assessment, Network Reconnaissance

Reverse / Exploit Dev: Reverse Engineering, x86/x64, Binary Analysis, Stack Exploitation, ROP, ret2libc, ELF/PE

Malware Analysis: Static/Dynamic Analysis, .NET Analysis, Deobfuscation, Ransomware Analysis

Programming: C/C++, Python, Assembly (x86/x64), Bash

Tools: Metasploit, Burp Suite, Nmap, BloodHound, Impacket, pwntools, Ghidra, IDA, GDB, Immunity Debugger, x32dbg/x64dbg, Wireshark

Languages: Arabic (Native) · English (Professional)
